

MOVE ON FROM MANUAL

Automate the exchange of patient data between payers with the **PTIE™** solution

Integrating Mettle Solutions' **Payer Transition Information Exchange (PTIE)** application into your software will finally automate, standardize and simplify the exchange of patient information when a payer change occurs – enrolling or exiting. Making the transition to the **PTIE** solution saves time and lifts costly burdens.

Move on from...

No standardization

Manual, slow, inefficient, non-scalable exchanges between payers

Administrators burdened with creating, updating, and sending information

New beneficiaries left frustrated and feeling vulnerable when their new payer does not have their information for weeks, or even months

Delaying treatment plans, increasing the risk of hospitalizations

...to the PTIE™ solution

Standardized process to exchange beneficiary data between previous and new plans

Configurable automatic triggering of patient data exchange – efficient, secure, and scalable exchanges resulting in time and cost savings

Streamlined, more automated workflows

Improved customer experiences and relationships

More continuity in beneficiary treatment plans, increasing loyalty of providers and patients

CMS' Interoperability Rule requires payers to transfer beneficiary information.

Why not make the transition to PTIE™ today?

So how does the PTIE™ solution work for you?

Using a payer directory, it introduces an alert system that requests information from the previous payer while the new payer is enrolling the patient.

A matching algorithm creates a standardized information set of benefits exchanged from previous to new payer, including claims information, active treatments, prior authorization information, and documentation about conditions and determinations.

The set of information exchanged is expandable beyond the required standard minimum set.

Each participating payer or plan is a sender and a receiver, supporting benefit transition for both enrolling and exiting.

It enables auto-routing to different plans, or contractors by jurisdictions.

It supports Medicare, MA plans and Medicaid managed care plans.

Mettle Solutions has a reputation for staying ahead of standards, developing solutions to streamline cumbersome manual processes like the exchange of beneficiary data between payers. The PTIE™ application is a single solution that automates and standardizes the exchange of both enrolling and exiting beneficiary information. Modernizing the way you transition not only provides a distinct competitive advantage, but it also positively impacts the healthcare landscape by creating a safer, higher-quality experience for payers, patients, and providers alike.

Move on from manual, today.

It's your move!
